

Globe valve actuator with fail-safe for 2-way and 3-way globe valves

- Actuating force 2000 N
- Nominal voltage AC 100...240 V
- Control 3-point
- Stroke 32 mm

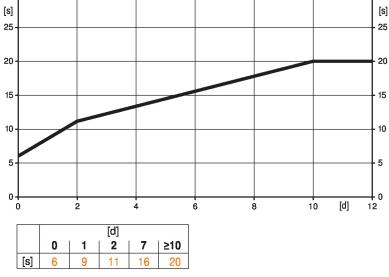

Technical data

Electrical data	Nominal voltage	AC 100240 V
	Nominal voltage frequency	50/60 Hz
	Nominal voltage range	AC 85265 V
	Power consumption in operation	3.5 W
	Power consumption in rest position	1.5 W
	Power consumption for wire sizing	6.5 VA
	Connection supply / control	Cable 1 m, 4 x 0.75 mm ²
	Parallel operation	Yes (note the performance data)
Functional data	Actuating force motor	2000 N
	Setting fail-safe position	Stem retracted / extended, adjustable (POP rotary knob)
	Bridging time (PF)	2 s
	Manual override	with push-button
	Stroke	32 mm
	Running time motor	150 s / 32 mm
	Running time fail-safe	35 s / 32 mm
	Sound power level, motor	60 dB(A)
	Sound power level, fail-safe	60 dB(A)
	Position indication	Mechanically, 532 mm stroke
Safety data	Protection class IEC/EN	II, reinforced insulation
	Power source UL	Class 2 Supply
	Degree of protection IEC/EN	IP54
	Degree of protection NEMA/UL	NEMA 2
	Enclosure	UL Enclosure Type 2
	EMC	CE according to 2014/30/EU
	Low voltage directive	CE according to 2014/35/EU
	Certification IEC/EN	IEC/EN 60730-1 and IEC/EN 60730-2-14
	UL Approval	cULus according to UL60730-1A, UL60730-2-14 and CAN/CSA E60730-1
		The UL marking on the actuator depends on
		the production site, the device is UL-compliant
		in any case
	Mode of operation	Type 1.AA
	Rated impulse voltage supply / control	4 kV
	Pollution degree	3
	Ambient humidity	Max. 95% RH, non-condensing
	Ambient temperature	050°C [32122°F]
	Storage temperature	-4080°C [-40176°F]
	Servicing	maintenance-free

Weight	Weight	3.8 kg
Terms	Abbreviations	POP = Power off position / fail-safe position CPO = Controlled power off / controlled fail- safe PF = Power fail delay time / bridging time
Safety notes

All applicable legal or institutional be complied during installation. irection of motion and so the closing point may be adjusted only direction of motion is critical, particularly in connection with ed at the manufacturer's site. It does not contain any parts that y the user.
Product features		
Mode of operation	integrated capacitors are loade	the desired operating position at the same time as the d. Interrupting the supply voltage causes the valve to be moved by means of stored electrical energy.
Pre-charging time (start up)	b) The capacitor actuators require a pre-charging time. This time is used for charging the capacitors up to a usable voltage level. This ensures that, in the event of a power failure, the actuator can move at any time from its current position into the preset fail-safe position. The duration of the pre-charging time depends mainly on how long the power was interrupted. Typical pre-charging time 30 [s]	

[d] = Electricity interruption in days [s] = Pre-charging time in seconds

Delivery condition (capacitors)

The actuator is completely discharged after delivery from the factory, which is why the actuator requires approximately 20 s pre-charging time before initial commissioning in order to bring the capacitors up to the required voltage level.

BELIMO	Technical data sheet	AVK230A-3
Setting fail-safe position (POP)	The rotary knob fail-safe position can be used to adjust the desired fail-safe position. The adjustment range always refers to the maximum height of stroke of the actuator. In the event of a power failure, the actuator will move to the selected fail-safe position, taking	
	into account the bridging time (PF) of 2 s set at the factory.	
Simple direct mounting	Simple direct mounting on the globe valve by means of form-fit hollow clamping jaws. The actuator can be rotated by 360° on the valve neck.	
Manual override	Manual control with push-button possible - temporary. The gear t actuator decoupled for as long as the button is pressed.	train is disengaged and the
	The stroke can be adjusted by using a hexagon socket screw key (the top of the actuator. The stem extends when the key is rotated	
High functional reliability	The actuator is overload protected, requires no limit switches and end stop is reached.	l automatically stops when the
Home position	Factory setting: Actuator stem is retracted.	
	When valve-actuator combinations are shipped, the direction of n with the closing point of the valve.	notion is set in accordance
Setting direction of motion	When actuated, the stroke direction switch changes the running of The stroke direction switch has no influence on the fail-safe positions are stroke direction switch has no influence on the fail-safe position.	
Restriction 3-point controller	It must be ensured that the pulsating 3-point controller stops who If this is not possible on the system side, the multifunctional 24 V MP) must be used.	-
